

Title: Multi Disciplined Maintenance Engineer

Reporting to: Operations Manager

£35,000 - £40,000

Holiferm is looking to recruit a qualified and experienced individual to fill this essential full time maintenance role. Applicants should ideally have the ability to troubleshoot and perform front line maintenance, repairs and rectification works on mechanical, instrument and electrical equipment on their own as well as monitoring and supporting contractors to perform works as and when necessary. Reporting to the operations manager and working within an operations team based environment the successful applicant will be a proactive, innovative and flexible individual, preferably with experience in the chemical processing industry.

Holiferm is presently building a new plant in Wallasey the main aim of which is to facilitate the transition of the \$36 billion surfactant market away from harmful, oil-based chemicals to biobased alternatives.

We offer a competitive flexible pay package and benefits to attract capable team members to join the Holiferm family, as we understand people have different circumstances.

We are looking for people who believe in helping us make a difference in the chemical industry, who believe in change and want to help us make a meaningful impact for both the chemical sector and the environment.

Multi Disciplined Maintenance Technician:

Role and Responsibilities

- Maintaining high work standards to ensure safe, sustainable, and reliable operations within the facility.
- Perform first line troubleshooting, maintenance and rectification works on all plant and equipment.
- When necessary, work with and support external contractors perform mechanical, instrument and electrical maintenance and rectification works on plant equipment, including planning.
- Build an in-depth knowledge of all plant equipment, with a level of process knowledge, to provide optimisation and troubleshooting support within the operations team.
- Both the capture and recording all maintenance activity and history in the electronic maintenance management system.
- Assisting operators when required during both commissioning and long term operations of the plant.
- Own the development and long term effectiveness of the spare parts stock system for all operational equipment.

Requirements

- Relevant maintenance experience and technical certification such as an HND/HNC
- Previous experience of working in the chemical industry.
- Good communicator with a “can do” and “positive” attitude.
- Good troubleshooting, organisational, decision-making and collaboration skills.
- Discretion and professionalism.
- Flexible and self motivated.
- Experience of working with maintenance management systems.

Desirables

- Chemical industry experience.
- Relevant levels of qualifications and experience across mechanical, instrument and electrical disciplines (with a primarily mechanical leaning preferred)
- Experience working in a fast-paced operational environment
- Has a passion and drive in making greener products
